

FIELD TRIAL BULK LIME—PH PLUS COMPARISON

Crop: Pasture (Dryland).

Location: “New Grove” West Gippsland, Victoria.

The above graph represents a trial comparison between bulk lime at 2.5 tonne per hectare and pH plus at 50 litres per hectare. Both treatments were applied in early autumn and soil analysis were taken in mid June. PH Plus has shown to be more effective than bulk lime with increasing soil pH while it was also more cost effective than bulk lime.
