

FIELD TRIAL  
BULK GYPSUM—GYP FLO COMPARISON

Crop: Cauliflower.

Location: Werribee South, Victoria

The above graph represents a trial comparison between bulk gypsum at 5 tonne per hectare and Gyp Flo at 100 and 150 litres per hectare. All treatments were applied pre-planting and were tested after harvest approximately 16 weeks after planting. Gyp Flo applied at 100 litres shown to be most cost effective treatment over bulk gypsum at 5 tonne and Gyp Flo at 150 litres.
