

PRODUCT COMPARISON

THERE'S GYPSUM and THEN THERE'S

(Patented Formulation)

When choosing a Gypsum product, most will make their selection based on the supply price without really doing their homework based on the % of Calcium and Sulphur and the technical difference of each product. Based on each products formulation and more so the application rates and shelf life also plays a massive part that when not carefully looked at can cost you more in the end.

We have put this technical notice together due to a lot of feedback from our resellers and growers that have applied **GYP-FLO** for over 10 years. They know that our product works and the benefits they receive from using **GYP-FLO**, while they also understand that **GYP-FLO** is the most concentrated and cost effective product in its field.

PRODUCT	CALCIUM %	SULPHUR %	SG
Bulk Gypsum (Grade 1)	22%	18%	1kg
GYP - LIFE	17%	15%	1.45 Kg/Lt
EZY-FLOW Gypsum	16%	13%	1.35 Kg/Lt
GYP-FLO	35%	25%	1.60 Kg/Lt

Always remember that when investing in liquid formulations you should first, check the SG (Weight) of the product and the % of nutrients contained because at the end of the day this is truly what you are really buying.
